www.bosch-motorsport.com

- ▶ Optimized for low and high pressure injection
- ▶ HP package for flat and V-engines inclusive
- Measurement with 41 analog inputs
- ▶ Multiple Software options available

The MS 6.4 engine control unit manages gasoline engines up to 12 cylinders. As a member of our MS 6 family it features a powerful digital processing core with floating point arithmetic and a high-end FPGA for ultimate performance and flexibility. The MS 6 family utilizes a new software development process based on MATLAB/Simulink which significantly speeds algorithm development by using automatic code and documentation generation. Custom functions can be quickly and easily generated. The flexible hardware design allows the MS 6.4 to support complex or unusual engine or chassis configurations.

HP package for flat and V-engines inclusive (2nd Bank, MSV2, cylinder 9-12)

Low pressure injection

Integrated power stages for the use of:
4 cylinders up to 12,500 rpm
6 cylinders up to 9,500 rpm
8 cylinders up to 8,500 rpm (depending injection types and pressure ranges)

HP package for flat and V-engines inclusive (2nd Bank, MSV2, cylinder 7&8, external cylinder 9-12)

Low pressure injection

Max. 12 cylinders up to 12,500 rpm, high impedance injectors only

Physical engine model for fast application

- determine engine load by throttle position or air pressure signals
- mixture control and basic ignition guided by main signal relative load rl
- Subsystems pit speed-, launch-, rpm-limiter and ASR are integrated inside torque control
- Separated power cut functions to assist several gear cut systems
- Diagnostic
- Integrated safety strategy for 2 electronic throttle controls
