BOSCH
Invented for life

- ▶ Thermocouple Type K
- ▶ Thermo material: NiCr-Ni
- ▶ Measurement range: 0 to 1,250°C
- ▶ Analog output (0 to 5 V) or CAN

This sensor is designed to measure exhaust gas temperatures up to 1,250°C.

Thermocouples are temperature sensors that supply a temperature corresponding voltage without any additional external energy source. The thermocouple has a metal mantle that includes two isolated inner wires made of thermo material NiCr-Ni Type K. The voltage is amplified by an electronic circuit powered by 12 V.

Please note that the operating temperature of the external electronics is from 0 to 120°C.

The benefits of this sensor are the combination of high quality production part, robust design and its integrated amplifier.

Application

Application	0 to 1,250°C
Operating temp. range (ext. electronics)	0 to 120°C

Technical Specifications

Mechanical Data

Male thread	M12x1
Wrench size	17 mm

Installation torque	15 Nm

Pin 1	U _s
Pin 2	Gnd
Pin 3	CAN High
Pin 4	CAN Low

Installation Notes

The sensor can be mounted individually according to the customer's request.

Please note that the operating temperature range of the external electronics is from 0 to 120°C.

Recommended bending radius of the wire of the sensor element is minimum 20 mm to ensure the sensor works properly and for a longer life-span of the sensor.

Any mounting orientation is possible.

Please find further application hints in the offer drawing and free download of the sensor configuration file (*.sdf) for Bosch Data Logging System at our homepage.

Safety Note

The sensor is not intended to be used for safety related applications without appropriate measures for signal validation in the application system.
